The Master of Surveying is designed to develop students who possess the theoretical background, professional ethics and practical skills necessary to undertake professional land surveying measurements and analysis.

What is Surveying?
Surveyors plan, direct and conduct survey work to determine and precisely position tracts of land, natural and constructed features and manage related information systems. A Surveyor's tasks include:

- Determining the position of points of interest on the earth's surface, including the ocean bed and preparing the final product data in digital form;
- Supervising the preparation of plans, maps, charts and drawings to give pictorial representations and managing automated information systems;
- Undertaking research and development of surveying and other relevant systems;
- Planning and designing land sub-division projects and negotiating details with local governments and other authorities and representative bodies;
- Advising engineers, environmental and other scientists or other relevant professionals on the technical requirements of surveying, mapping and spatial information systems;
- Supervising and coordinating the work of surveying associates and field assistants.

What does it take?
Applicants should have a completed Bachelor degree in a related discipline from a recognised higher education institution or equivalent qualification. This degree will have strength in geospatial science and will reside in disciplines such as geographical information systems, science, environmental science, natural resource management and geography. Applicants must have passed university coursework with the following content:

- Maps and coordinate systems
- Introduction to geographical information systems
- Geographical information systems analysis and applications
- Remote sensing
- Basic land surveying including GPS
- Introduction to environmental/earth systems
- First year mathematics (preferably engineering mathematics)
- First year physics
- Introduction to urban planning

South Australia is currently experiencing a critical shortage of land surveying graduates. The shortage of graduates is Australia-wide and is destined to increase due to the retiring professional surveying population and an increase in development opportunities in the land, engineering and mining areas. Upon successful completion of the program our graduates are in high demand providing excellent employment outcomes.
What will I study?

The program comprises ten courses and requires the completion of 54 units over a two year period. An exit point is available at the successful completion of first year with the award of Graduate Diploma in Surveying.

Graduates of the Masters degree will find employment in the land boundary (cadastral) and engineering surveying areas. At the end of year one of the degree, students will be eligible to enter into an agreement with the Surveyors Board SA to undertake training in cadastral surveying, which will lead to formal licensing by the Board.

Professional recognition

The program is recognised by the South Australian Board of Surveyors for the purposes of licensing as a Cadastral Surveyor in South Australia. Licensing in South Australia is recognized by all other states in Australia and in New Zealand, though minor additional training may be required in these locations.

Graduates of this program are eligible for membership of the Surveying and Spatial Sciences Institute (SSSI).

Pathways to the Master of Surveying

- **Masters of Surveying**
  - University of South Australia

- **Bachelor of Science**
  - University of South Australia
  - GIS Major
  - Maths and Physics Minors

- **Bachelor of Geospatial Science**
  - University of South Australia

- **Advanced Diploma of Spatial Information Services**
  - (TAFESA)

- **Bachelor of Environmental Science**
  - University of South Australia
  - (pre-requisites required)

- **Bachelor of Applied GIS**
  - Flinders University
  - (pre-requisites required)
